INSTALLING THE SLIDER INTO A TEMPLATE WEBSITE
CIS385 Web Programming I

PART1 ISOLATE SLIDER APPLICATION

STEP01 Download from BB the JCarouselFiles.zip

STEP02 Extract the JCarouselFiles
- JCarouselFiles/jssor.carousel.slider.for.bootstrap.example.zip
- JCarouselFiles/simplestyle_5.zip

STEP03
Rename JCarouselFiles/jssor.carousel.slider.for.bootstrap.example to
JCarouselFiles/sliderexample

STEP04 Rename JCarouselFiles/sliderexample/examples-bootstrap
to   JcarouselFiles/sliderexample/slider

STEP05 We will work on bootstrap-slider.html web document of the
JCarousel folder. So rename it to slider.html

STEP06 Now open slider.html with an html editor and erase everything
from the slider.html web page except for the carousel slider
portions as shown in class.

STEP07 Now archive the sliderexample folder to sliderexample.zip

PART2 PORTING SLIDER
STEP01 Extract the simplestyle_5.zip archive

STEP02 Copy all the files within the simplestyle_5 folder into the
sliderexample/slider sub-folder

STEP03 The easiest way to port the slider within the slider.html into
the index.html of the template website is to place the slider code
between the menu and content sections. Determine where this location
is. Marked this area with HTML comments as shown below.

```
    <!-- SLIDER CODE --> SLIDER CODE HERE    <!-- SLIDER CODE -->
```

STEP04 Port the slider code into the index.html designated area.

STEP05 Now copy the JavaScript code of the slider at the end of the
HTML web-page.

STEP06 Finally, adjust slider size
